Australian Industry Risk Analysis

Workbook-backed chart report

This report consolidates the chart pack for industry risk analysis. Public ABS/RBA metrics are used wherever available. The only hard-coded workbook inputs retained are sector debt/EBITDA, ICR, AR/AP benchmarks, borrower archetype financials, bank portfolio exposure by sector, and bank pricing/policy settings.

Included charts

C01 Industry Risk Dimensions Heatmap

C02 Industry Base Risk Score by Sector

C03 Employment Growth by Industry

C04 Borrower Industry Risk Scorecard

C05 Indicative Pricing by Borrower

C06 Sector Concentration: Current Exposure vs Limit

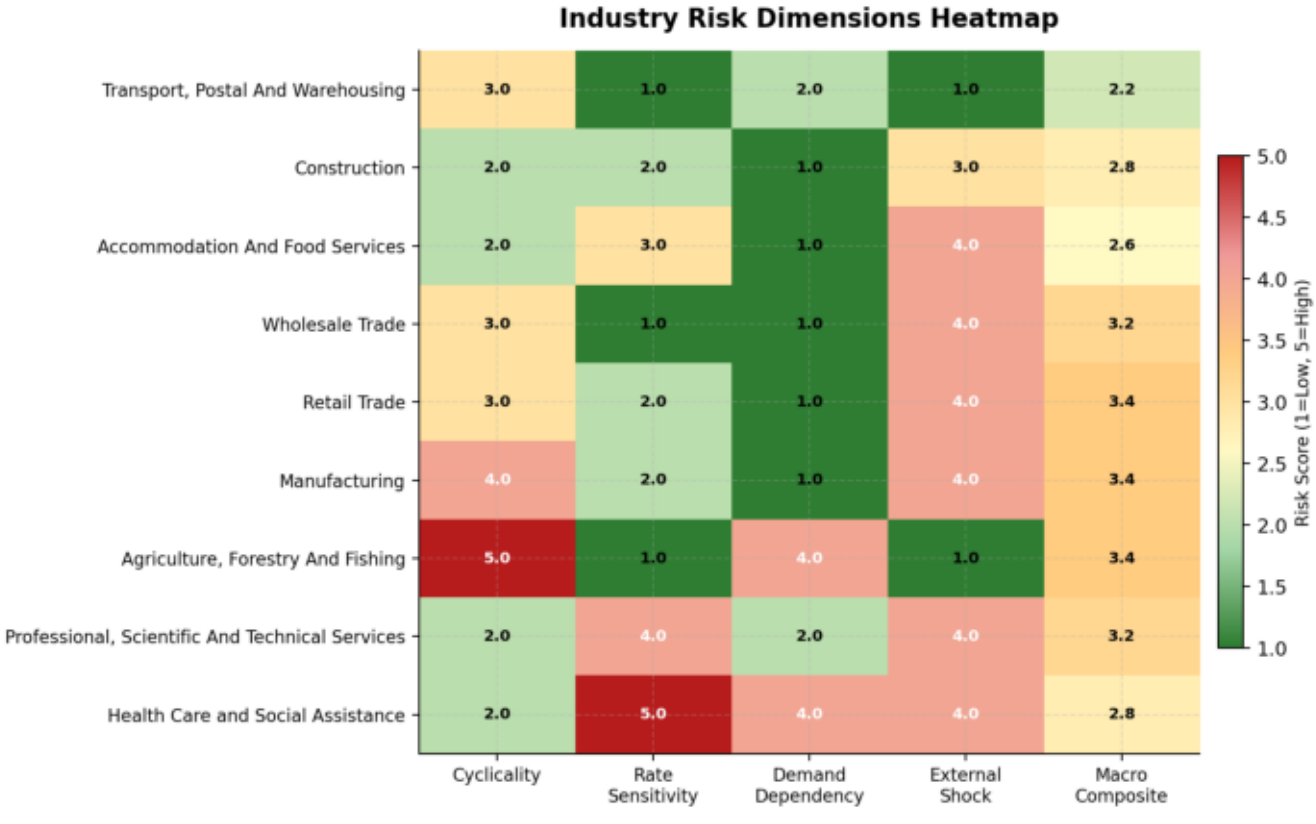
C07 Industry Watchlist Trigger Count

C08 Industry Stress Test Impact

C01 Industry Risk Dimensions Heatmap

Source sheet: chart_data_heatmap

Metric basis: Public ABS/RBA metrics plus public-data-derived classification scores



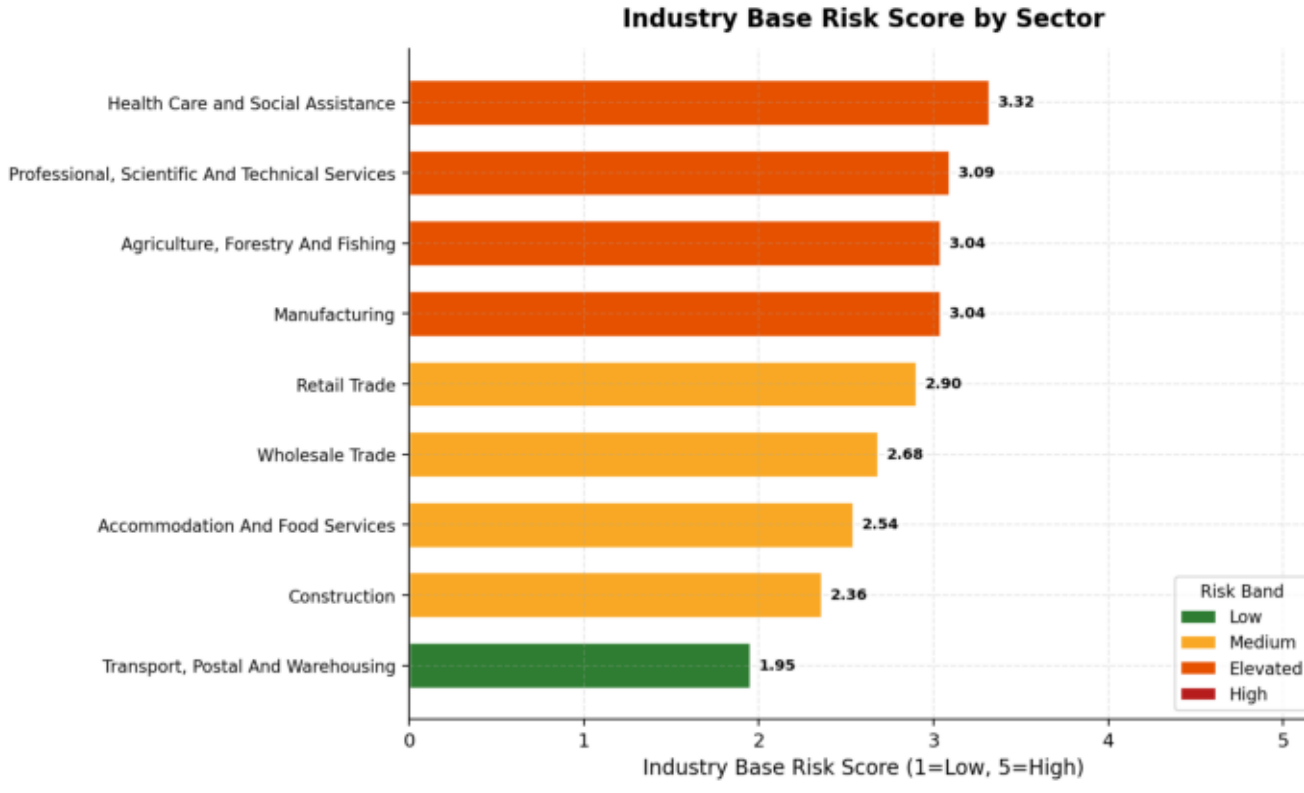
Explanation

The heatmap shows how public-data-derived classification dimensions accumulate into the industry view. Across the portfolio, external shock is the most severe average dimension, while Health Care and Social Assistance carries the highest base score at 3.32.

C02 Industry Base Risk Score by Sector

Source sheet: chart_data_industry_s

Metric basis: Public ABS/RBA metrics plus public-data-derived classification scores



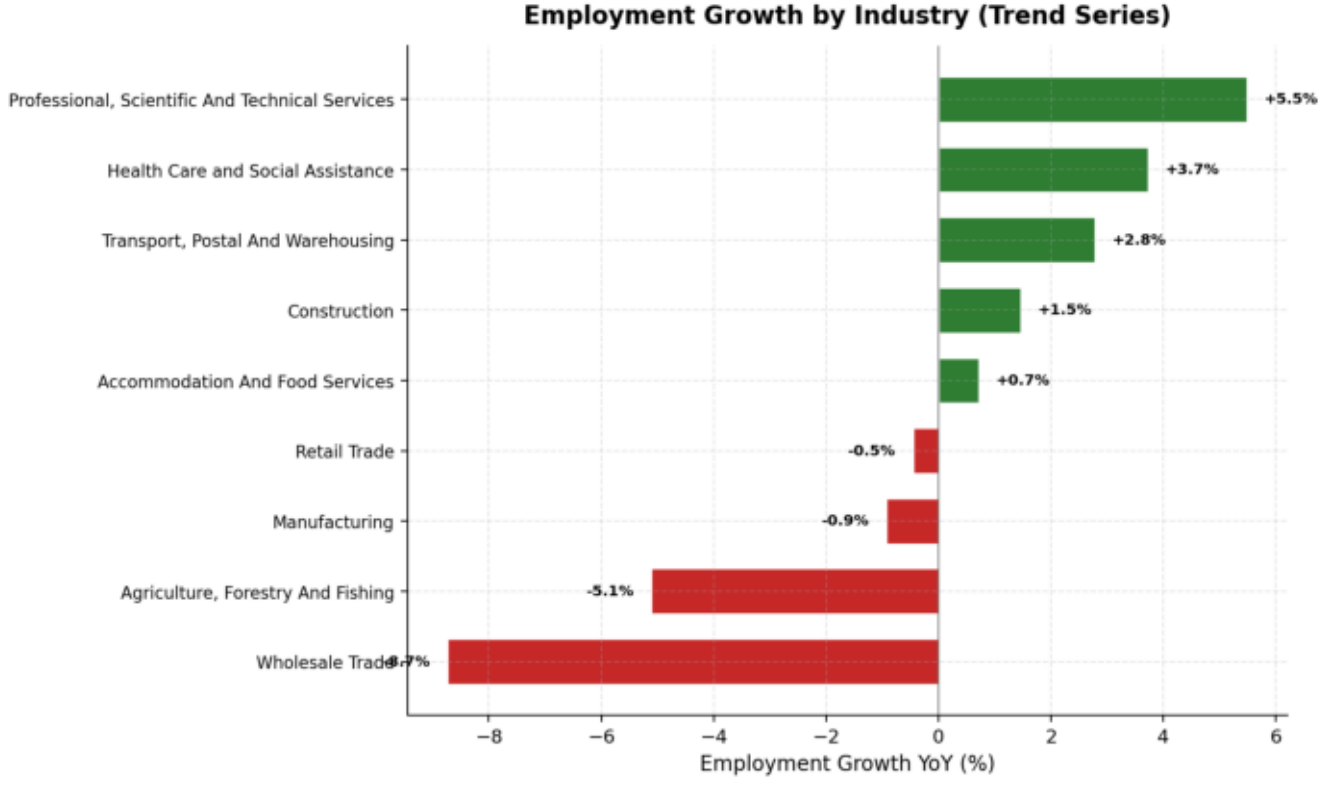
Explanation

This ranking is the core sector risk view for credit analysis. Health Care and Social Assistance is currently the highest-risk sector at 3.32, while Transport, Postal And Warehousing is lowest at 1.95. These scores combine public ABS/RBA signals with public-data-derived classification scores.

C03 Employment Growth by Industry

Source sheet: chart_data_industry_s

Metric basis: Public ABS labour-force series



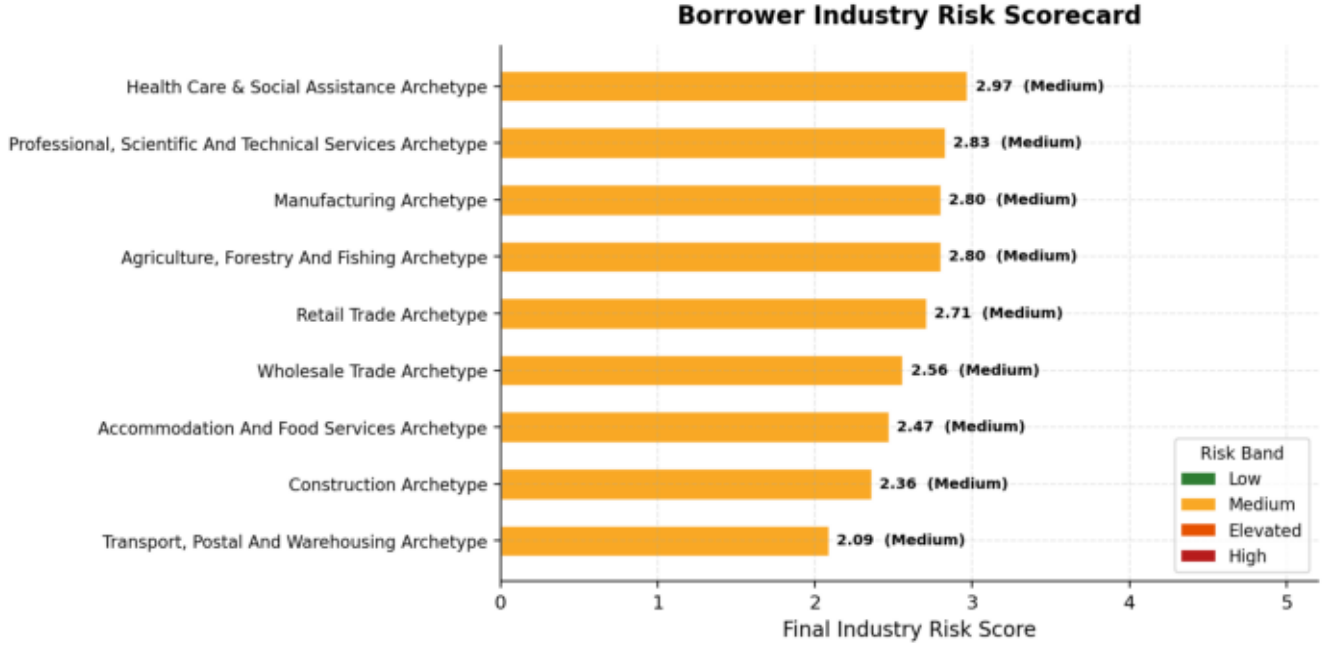
Explanation

Employment growth is one of the cleanest public signals for near-term sector momentum. Professional, Scientific And Technical Services shows the strongest YoY growth at +5.5%, while Wholesale Trade is weakest at -8.7%.

C04 Borrower Industry Risk Scorecard

Source sheet: chart_data_borrower

Metric basis: Workbook hard-coded borrower archetype financials combined with public sector metrics



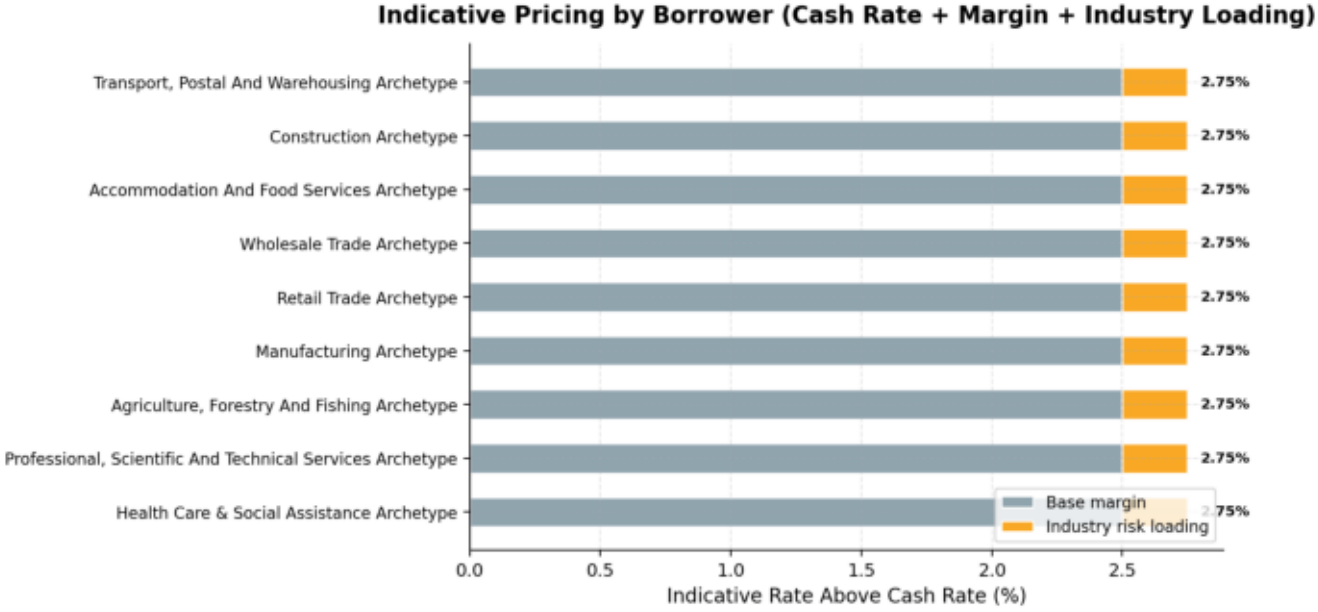
Explanation

This scorecard uses workbook hard-coded borrower archetype financial statements because borrower-level accounts are not public. Health Care & Social Assistance Archetype is the highest-risk archetype at 2.97, while Transport, Postal And Warehousing Archetype is lowest at 2.09.

C05 Indicative Pricing by Borrower

Source sheet: chart_data_pricing

Metric basis: Workbook hard-coded pricing settings combined with workbook borrower score outputs



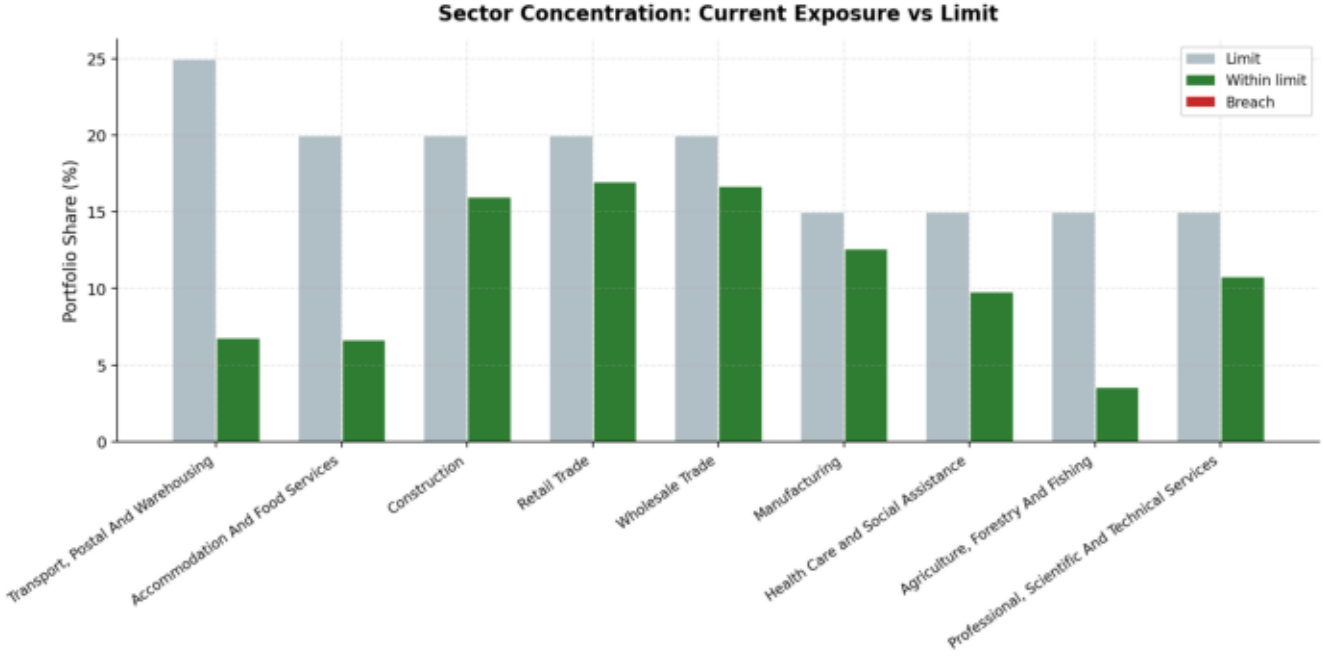
Explanation

Indicative pricing is driven by the workbook hard-coded pricing settings layered onto borrower risk scores. All borrower archetypes currently price at a uniform 6.60% all-in rate under the hard-coded pricing settings.

C06 Sector Concentration: Current Exposure vs Limit

Source sheet: chart_data_concentrat

Metric basis: Workbook hard-coded bank sector exposure plus hard-coded limit settings



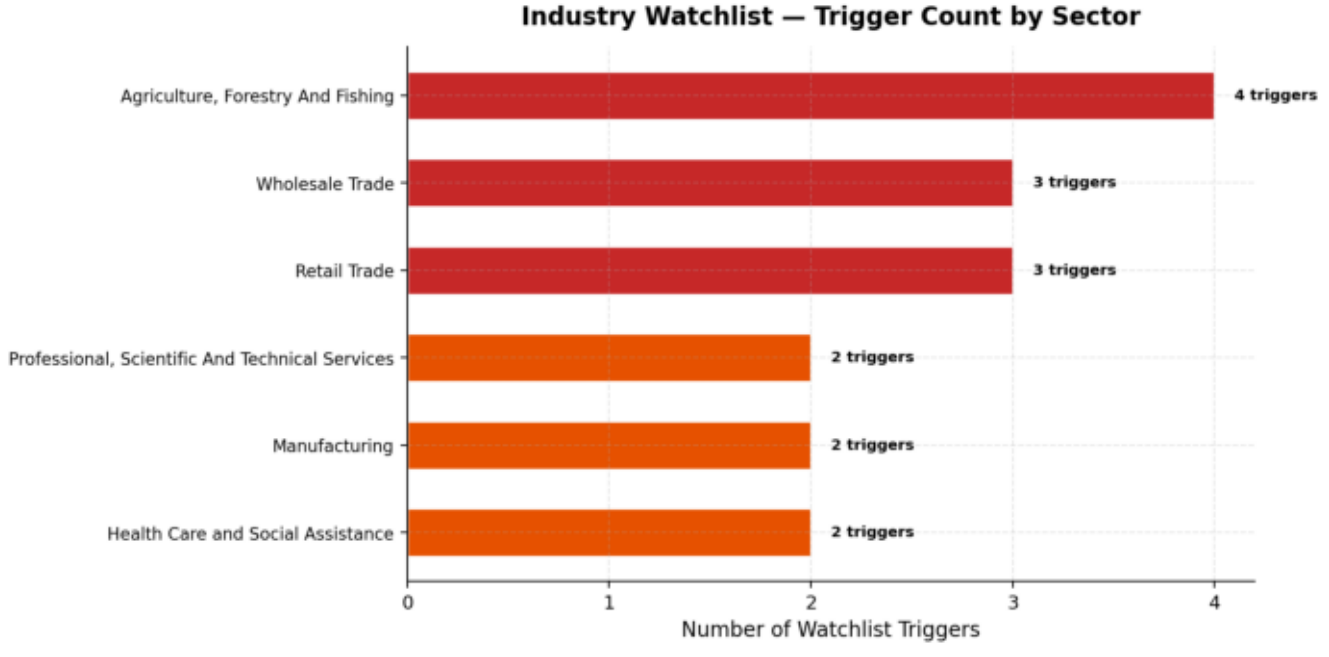
Explanation

This chart compares workbook hard-coded bank sector exposure against workbook hard-coded concentration limits. The highest utilisation is Retail Trade at 85.0% of limit. No sector currently breaches the hard-coded concentration limits.

C07 Industry Watchlist Trigger Count

Source sheet: chart_data_watchlist

Metric basis: Public ABS/RBA signals converted into watchlist rules



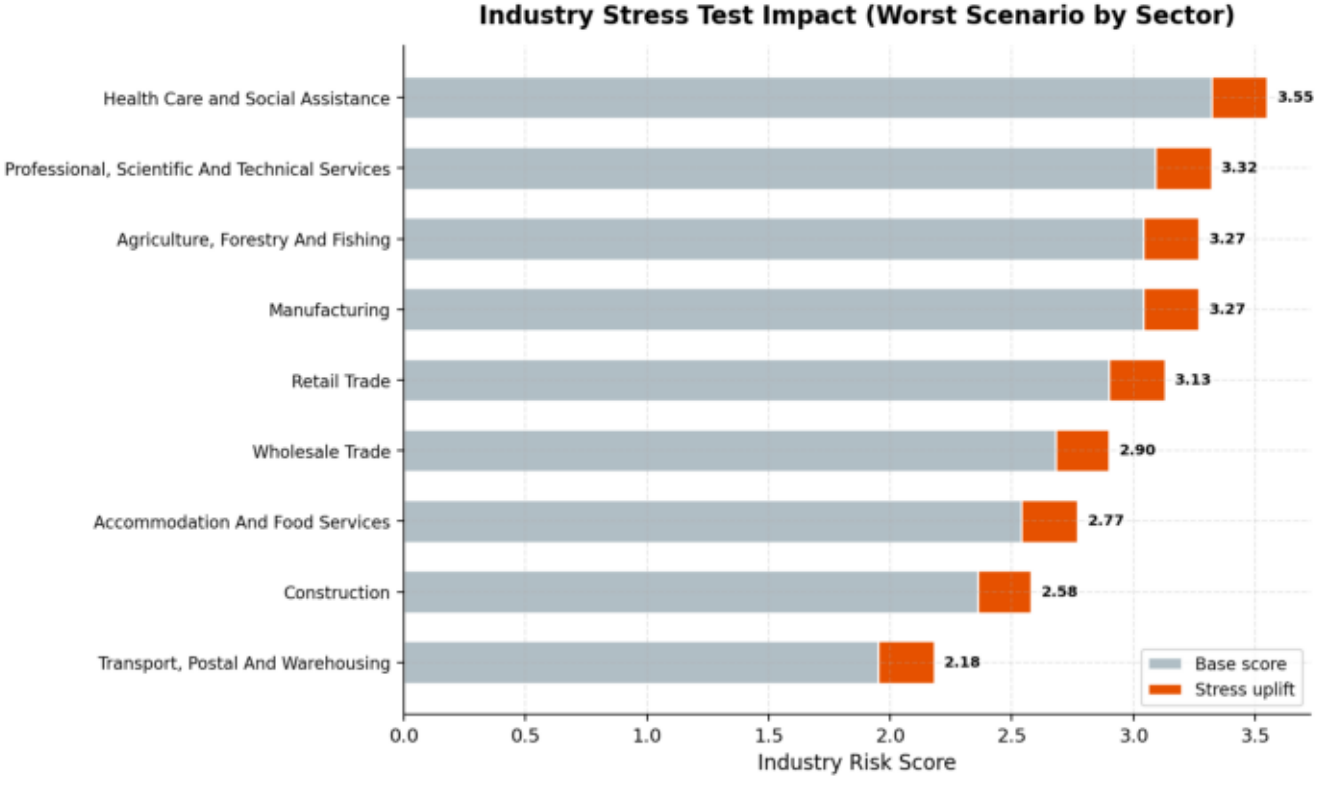
Explanation

Watchlist counts translate public ABS/RBA warning signals into a monitoring queue. Agriculture, Forestry And Fishing has the highest number of triggers at 4, which should drive intensified sector review and obligor screening.

C08 Industry Stress Test Impact

Source sheet: chart_data_stress

Metric basis: Public ABS/RBA metrics with bank-style stress assumptions



Explanation

The stress matrix applies bank-style scenario shocks to the public-data sector view. Demand shock produces the largest average uplift at 0.23 score points, and Health Care and Social Assistance reaches the highest stressed score at 3.55.
